PROFILE

I work at the intersection of traditional structural design and computational methods, focused on finding the right solutions with parametric and automated approaches in the transport and infrastructure market. At Ramboll, I drive computational design, automation, and AI adoption within a dedicated working group - building internal tools, running training and hackathons, and pushing the organisation toward new ways of working.

EXPERIENCE

Engineer and Computational Designer | Ramboll

April 2021 - Present

- Member of the Computational Design Working Group in Transport Denmark: upscaling staff skills, screening new projects, and driving computational design, automation, and AI adoption across the organisation.
- Product owner and developer of internal design tools, including parametric FE model automation and Rhino/Grasshopper-based generation of complex bridge geometry. Examples are Dråbebroen, E6 motorway, E45 motorway and the Fehmarnbelt Tunnel.
- Led the internal R&D project "AI in Productized Bridges," presented at the AI in AEC Conference in Helsinki, March 2025.
- Co-organised internal hackathons with external clients in Copenhagen, Stockholm, and online.
- Performed structural design of A-frame bridges and widenings, post-tensioned concrete road bridges, concrete rail bridges, and steel/concrete pedestrian bridges, combining Rhino, Grasshopper, SOFiSTiK, Robot and Tekla in unified computational workflows.

Intern | Atkins / Systra

Sept 2017 - Jan 2018

- Structural verification of an existing bridge.
- New design of a pedestrian bridge.

EDUCATION

MSc, Civil and Architectural Engineering | Aarhus University

Feb 2019 - Jan 2021

- Specialised in structural design, numerical methods, computational design, and optimisation algorithms.

BEng, Building Design | Aarhus University

Aug 2015 - Jan 2019

- Semester abroad at UC San Diego, enrolled in aerospace engineering courses.

TECHNICAL SKILLS

- Programming: Python, C#, Grasshopper, HTML/CSS/JavaScript, Git
- Software: Rhino, Grasshopper, SOFiSTiK, Autodesk Robot, Tekla, BoHm
- Languages: Danish (native), English (fluent)

SPEAKING & COMMUNITY

- AI in AEC Conference - presenter, Helsinki, 2025
- Computational Design Network Denmark (CDND) - Second Chair
- AEC Hackathon - participant, Copenhagen, 2024

INTERESTS

Particularly interested in tools that sit at the intersection of structural engineering and computational design - moving structural engineering software from repetitive manual analysis toward parametric, automated, and interactive workflows.
